What is Digital Signage?

A visual communication solution for schools that allows messages, photos, announcements and videos to be displayed on screens. The service is easily managed by the school via a simple, dedicated website. No computer expertise is required, and updates can be done at any time.

It is a low cost, low maintenance solution designed to meet each school's specific requirements.

- **Easy to manage**
- **Designed for schools**
- **User-friendly and intuitive interface**
- **Content can be updated instantly**
- **Low cost**
- **No complicated training required**

Whether you'd prefer Digital Signage throughout the school with all screens showing a mix of content or just a single screen in reception, we can provide what you need just how you want it, at cost-effective pricing.

Communicate with students, staff & visitors

Display photographs, videos, presentations & more

Show live RSS feeds from relevant websites

Display local weather information & the current time

Post messages, updates, schedules & lunch menus in an easy-to-update text-based format

Scalable solution can display the same or different content via single or multiple screens

Free online user training videos

Free software updates

Display school calendars & events

Step by step guide...

1.

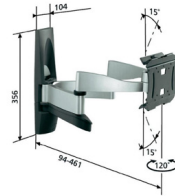

Pick your screen size

You can start with a single screen and expand your system to any size whenever your requirements change

2.

Choose your bracket

A wide range of display screen brackets is available, from flat wall mounted to swinging boom arm and ceiling pole mounted solutions

3.

Decide your layout design

Choose between pre-existing layout designs and bespoke options

4.

A design is created using your school branding

5.

You sign off the design when you're happy

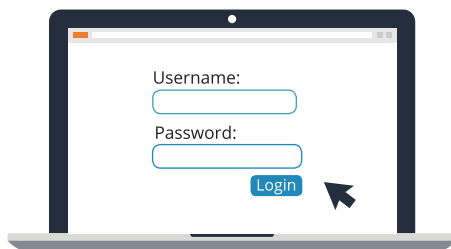

6.

Screens get installed in your chosen location

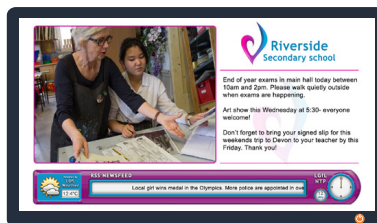

7.

Login to your digital signage website

8.

You have full access to add text & images to keep your signage informative and up to date

How the system works

The Atomwide Digital Signage system uses mini Android devices to provide a hosted service.

This results in an efficient yet cost-effective system that can use the latest high definition display technology or your existing screens. This highly scalable system allows you to start with a single screen and expand whenever your requirements change. Content can be displayed via a single screen in a main area or broadcast across multiple screens spread around school. In multi-screen configurations, all screens can show the same content or each screen can have its own content.

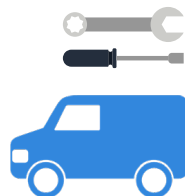

Training & support

On-site training options are also available on request, at an agreed cost. All hardware is supplied with a one year return to base warranty and a cost effective annual maintenance contract covers all support including access to a UK-based online and telephone help desk for any support assistance.

Installation & set-up

Atomwide offer a full installation service and will agree on display screen locations prior to any works being undertaken. All Atomwide installation engineers are DBS checked and carry photocard identification with them at all times whilst on a school's site. Risk assessments and methods statements are also available upon request.

What our schools say...

“For a school the size of Belleville, effective communication with staff, pupils and parents is essential. The digital signage solution from Atomwide was the obvious way forward to ensure that everyone is kept up-to-date with school events. Excellent advice with a personal touch, Atomwide provided just what we were looking for. Their efficient after sales support has also been invaluable.”
